ELING AGENTS. Persons solicited to subscribe for The Herald should beware of imposters and should not pay money to anvone unless he can show that he is legally authorlzed by the El Paso Heraid.

Prohibition In Texas

THE proposition to submit a prohibition amendment to the people of Texas will be included in the Democratic platform again this year. If a prohibition amendment were submitted to the people of Texas, it would carry. So far as El Paso and the other cities of the state are concerned, The Herald would regret the embodiment of such a provision in the constitution of the state because it would be violated every day in the year, thus bringing disrepect upon the constitution and the law and achieving no good end.

The spread of local option with high license and strict regulation of the liquor traffic is the practical method of dealing with the problem at this time. Under local option in Texas 155 counties have already voted dry and 61 counties are only part wet, leaving only 21 counties to be classed as wet. Approximately 55 percent of the population of Texas lives in dry counties, 35 percent in partially wet counties, leaving only 10 percent of the population living in wet counties.

The progress of prohibition under local option seems to have been pretty satisbetory up to date, even to the extreme prohibition element, and there is no reato enact statutory or constitutional prohibition, which is sure to be inoper-We at this time in the cities of the state.

The Tucson Star heads up a story in big black letters, "The Churches Prepare For Heated Term." Well, isn't that exactly what churches are for? Reading on further in the story we find that several churches will discontinue all services for several months this summer, and even the Christian Endeavor societies will go out of business. Information concerning his Satanic majesty's annual summer vacation has not yet been received. Presumably he goes out of business in the summer, too, or the churches would not quit their job.

A California man committed suicide because he feared the comet would burn up the earth and he didn't want to die that way-and this is the coldest May we have had in a generation.

Ibsen, the great Norwegian dramatist, knew how to use the newspapers and to find inspiration in them for his great constructive literary work. Out of newspapers largely he gained his knowledge of human nature and of the world's doings. He saved thousands of clippings bearing on all the facts and phases of human life. The advertisements, he maintained, were as instructive as the news and they interested him especially. Ibsen rarely read a book, but found his pleasure and profit in newspaper reading.

A \$750,000 Hotel Needed

LARGE new hotel such as is planned for this city will not draw business away from the existing houses, but will take-care of a class of traffic that does not now patronize any of the local hotels. It is the experience everywhere in the middle sized cities that the building of one or two big, fine, costly hotels, encourages general hotel traffic and benefits all the smaller, cheaper hotels.

There is a class of traffic that should make El Paso a headquarters and stopping point that we now get no benefit from. For instance, take eastern mining men of wealth, who are interested in properties in Arizona or Mexico; they wish to meet here the men they are carrying on negotiations with, and all parties to important trades of such a kind are careless of what they pay any hotel, provided they get the kind of accommodations they are used to and want. Then there are wealthy people from the east and north traveling to California or Mexico for recreation and health; they may have their wives and daughters along and would gladly stop over in El Paso a few days or a few weeks, if there were an attractive. comfortable place to stop. But everybody knows that there is no hotel now in operation that offers attractions to this class of travel. And there is the large and increasing number of wealthy Mexicans traveling to the States.

A large, costly, well managed hotel would attract to El Paso the class of people who have made Los Angeles, Denver, Seattle and Portland what they are today. Investments would be the natural result of visits here under favorable circumstances, for this city invariably makes good with newcomers after a long enough acquaintance under proper conditions.

Which is the better advertising medium, the paper that gives its space away, or the paper that sells its space at a fair price?

The truest, and in fact the only, explanation of the high cost of living is given by James J. Hill, who says that "the high cost of living is due to the cost of living high."

The strong pressure brought to bear by Mexico upon the Washington administration with reference to rushing work on the Elephant Butte dam is having its results. It is not probable that there will be any further serious delay, and within three or four years this whole valley should be feeling the benefit of the storage of flood waters at the dam site.

Western Men May Force It

ESTERN men in congress are again to throw their great influence behind a progressive measure against the opposition of the east by forcing action on the \$30,000,000 bond bill for the completion of reclamation projects. The western congressmen purpose to place this bill as a rider upon the administration land withdrawal bill, making the enactment of the land bill conditional upon the approval of the bond issue for reclamation.

The bond plan to secure funds without delay for the early completion of reclamation projects is excellent. It has the support of president Taft, and it should be enacted into law without delay. The bill has already passed the senate, but has been held up in the ways and means committee of the house.

Out of the bureau of mines newly established should grow a department which will do for the mining industry of the country what the department of agriculture has done for the farming interests. One of the first duties of the bureau of mines will be to make mining a safer occupation for the working man. The United States is more careless of human life than any other country in the world. It is a distinction which we can well afford to forego.

I NCLE WALT'S Denatured Poem

'VE heard the eats above the ceiling turn loose a raft of frightful squealing, at dreary midnight's hour; they seemed to say: "Though rocks may thump us, we'll still kick up our beastly rumpus"—they made my blood turn sour. I got my gun and said: "A load'll convince them that they cannot yodel all night upon my roof; I sent some buckshot catward winging, but still the brutes kept up their singing, for eats are reason-proof. You can't convince a blamed old tabby its voice is burn and weak and

CATS AND PEOPLE

flabby, and harsh and flat and raw; it seems to say: "I beg your pardon, but I'm the famous Mary Garden. and also Ellen Yaw." And there are sundry huntan critters, who jar me like a dose of bitters, who leave me

sore and pained; they come and tell me ancient stories, as stale as last year's morning glories, and think I'm entertained. I say to some heart-rending feller: You are the punkest story teller that reprobation earns; and it you spring another fable I'll break your wishbone with a table, so help me Tommy Burns." You'd think he'd leave me to my sorrow, but no! he comes around tomorrow, another yarn to spring, another heavy tale to gurble, persistent as the cats that warble, and think that they can sing?
